To whom it may concern,

Subject: Mechanical DRI device

1. We are writing to confirm that our organization had purchased 5 Mechanical DRI devices from: Automatica Engineering & Technology E.M.A.R Ltd.
2. The DRI devices are used for spine injury assessment during underbelly blast tests of armored vehicles during the development phase and as complementary measuring device when the number of ATD's is limited on the final approval test.
3. The DRI devices were tested and proven to meet attached accelerometers results and neighbor seat hybrid III dummy.
4. We found these devices practical and cost effective.

Sincerely,

Lt.C. Shimon Hayoun
Head of Armor team
Tank Development Authority
Merkava Tank Program
